Printer Purchasing Process for Faculty and Staff (Drop Down Menu Option 2)

All printer purchases for faculty and staff on-campus use must appear on OIRT's list of approved printer models. For the most up to date list of approved printer models, please contact the Purchasing Department. The purchase of any printer not on the list must be pre-approved by the CIO.

Determining if a printer will be directly connected or on-network

Faculty and Staff Members have the option of either making a direct or network connection to the printer. A direct connection is when a printer is connected to single computer and an on-network printer means that multiple parties can print to it.

If you are planning to use a direct connection, simply purchase any printer contained on the Purchasing Department's list of approved models and follow the instructions for "Installing a Local Printer" in the "Connecting a Printer for Faculty and Staff Members" section below.

If your new printer will be on-network, please ask your department to open a UTAC ticket for USAN to investigate the viability of any data jacks in the vicinity of where the printer will be located. The full workflow for this process is shown in the following diagram.
